SUMMARY

Data Analyst with over **4 years of experience** driving automation, data visualization, and performance optimization across retail, health, legal, and education domains. Skilled in tools like SQL, Power BI, Snowflake, and Python, with a track record of reducing report **prep time by 50%** and boosting operational **efficiency by 60%**.

WORK EXPERIENCE

Data Analyst | Meta — August 2025 – January 2026

- Executed **advanced statistical analysis and forecasting** (linear & logistic regression, time-series models) on **10M+ rows** of advertiser and product data, driving **15–25% improvement** in insight-led decision outcomes.
- Collected and cleaned **more than 1000 robot interaction records**, analyzing data quality issues and identifying deficiencies to improve dataset reliability
- Conducted **A/B testing across multiple robot model experiments**, analyzing performance across different environments and reducing manual evaluation efforts by a**pproximately 40%**.
- Performed **EDA and built Power BI reports** comparing **multiple robot models across 15+ performance KPIs**, enabling clearer insights for model improvement and experiment tracking.

Data Analyst (Apprentice) | Rupp Pfalzgraf — February 2025 – May 2025

- Collaborated with a leading law firm to develop and deploy an interactive performance analytics dashboard, reducing employee performance review time from **22+ hours to under 5 minutes.**
- Collaborated with a leading law firm to develop and deploy an **interactive Power BI performance analytics dashboard**, reducing employee performance review time from **22+ hours to under 5 minutes**.
- Designed an **ETL workflow using Power BI and Excel (Power Query)** to extract, transform, and organize legacy datasets into a structured reporting model, improving data consistency and usability.
- Translated client KPIs into **dynamic Power BI dashboards with API integrations and scheduled refresh**, automating multi-source data flows and improving reporting accuracy and operational efficiency by **60%**.

Data Analyst and ML Ops. Intern | Sophtimize Consultancy Services — December 2024–February 2025

- Designed and maintained **scalable data + ML pipelines** using **Snowflake, DBT, and Apache Airflow**, processing **3,000+ retail transactions, inventory, and customer records** and improving pipeline performance by **60%**, enabling **near real-time feature availability** for ML models.
- Implemented **SQL-based transformation and validation layers** (CTEs, window functions, complex joins, data quality checks), reducing downstream data errors by **40%** and supporting reliable **feature engineering and model training datasets**.
- Enabled **reproducible ML workflows** through **versioned DBT models** and **scheduled Airflow orchestration**, improving cross-team collaboration and reducing manual pipeline intervention by **30%+**.
- Built **interactive Tableau dashboard** to monitor **data freshness, feature distributions, and business KPIs**, increasing pipeline observability and reducing stakeholder dependency on ad-hoc data requests by **25%**.

Data Analyst | Dentsu | *client: Qualtrics, The Home Depot, Kmart, Meta* — June 2022–June 2024

- **Analyzed 500+ retail transactions** and customer feedback records **for the Home Depot project using** SQL and Python**, performing EDA and segmentation analysis to identify 10+ key** customer behavior patterns**.**
- **Developed an** NLP-based sentiment analysis model in Python **using TF-IDF techniques, achieving 85–87%** classification accuracy **in identifying positive, neutral, and negative customer sentiment.**
- **Performed** customer performance and segment analysis using SQL queries (joins, aggregations) **across 5** retail metrics**, supporting data-driven retail strategy and customer experience insights.**
- **Built an** ETL workflow using Python and SQL **to clean, transform, and migrate data into** automated **Power BI** dashboards tracking **15+** business KPIs, reducing manual reporting effort **by ~50%.**

EDUCATION

University at Buffalo, The State University of New York — **Buffalo, NY**

Master's in Management Information Systems (STEM) — May 2025

Courses: Data Warehouse, Predictive Analytics, Database Management, Risk Management

SKILLS

Programming Languages & Tools: Python (Pandas, NumPy, Matplotlib, Seaborn, scikit-learn), SQL, R

Data Analytics & Machine Learning: Exploratory Data Analysis (EDA), Hypothesis Testing, Regression, Clustering, Classification, Data Visualization, SQL Server Management Studio (SSMS)

Database Management & ETL Tools: Snowflake, AWS Cloud, DBT, Apache Airflow, Looker, MySQL, PL/TSQL, Oracle Database, Power BI, Tableau, Excel
